

Covid-19 Testing Instructions

As you know, our area is experiencing a spike in Covid-19 infections and many of our patients are at higher risk. In an effort to protect our patients, our staff and our community as a whole, we have implemented the following Covid-19 safety precautions.

Each and every patient must remain masked at all times while at Bravia Dermatology. This includes while by yourself in an exam room. If your visit requires that you remove your mask at any time, you must be tested for Covid-19 prior to your appointment. Therefore, any procedure in and around the mask area, requires that you be tested prior to your appointment.

Your negative test must occur within 1 week of your appointment (measured from the date of your test, not receipt of results). Results can take between 2-4 days, depending on community demand. Please try to start this process a full week prior to your appointment. If you are unable to schedule your test at least 3 days prior to your appointment, please call our office.

Attached is a list of testing sites for the area. Instructions and special notes are included to make this process as easy for you as possible.

The cost of these tests should be covered by your insurance. Please note that if you go to an urgent care location, they may require a clinical evaluation prior to your Covid-19 test, which may result in a copay/deductible. Regardless, check with your insurance carrier if you have questions or concerns.

FAQs

Why do I need to get a Covid test? I live alone; I'm safe; I wear a mask; etc.

No precautions are 100% effective and Covid is highly contagious. We need these precautions to protect our patients, many of whom are at higher risk for serious complications.

I had Covid before, do I need to be tested again? Can I get an antibody test?

You need to be tested again. Unfortunately, until we know precisely how accurate the antibody tests are, an antibody test is not accepted. We need a negative test within 1 week of your appointment.

How much will a Covid test cost me?

The cost of these tests should be covered by your insurance. Please note that if you go to an urgent care location, they may require a clinical evaluation prior to your Covid-19 test, which may result in a copay/deductible. Regardless, check with your insurance carrier if you have questions or concerns.
